Updating Metadata in OSCAR: SHADOZ Progress & Challenges

- Progress:
  - Successfully obtained an account to edit metadata files.
  - 12 of 14 SHADOZ stations actually affiliated with "SHADOZ" in OSCAR. Added affiliation of "SHADOZ" to missing (Hilo and Hanoi) stations. Couldn't edit those stations before that.
  - Started process of checking stations needing updates or edits to metadata.
  - General information about the SHADOZ stations is mostly entered correctly except for SHADOZ station contacts (several missing or incorrect).

- Challenges:
  - WXML files are complex and not all fields are filled in currently. How much **NEW** information should we be adding to the metadata files? Or is this effort to make sure what's in there already is correct?
  - Most SHADOZ stations have other observations/networks associated with them.
    - How do we organize shared editing with these stations/files?
    - Example: "site description" does not include SHADOZ. Other projects at that station are listed there.
  - Once metadata is updated, how often are we expected to update these files if it's not being done automatically?
